Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: The examiner and applicant discussed claim 69 in light that claims 1-68 will be potentially canceled. Applicant discussed the limitation of the switching mechanism relative to the illumination source and the dual electrode heating tip. Applicant noted some potential locations in the Specification that disclosed a limitation in which the illumination source is powered independently of the heating element and directed the examiner to Figure 5 of the application. The examiner noted that Figure 5 discloses the illumination source and the heated tip as being parallel configured to allow for independent control of the heating tip with respect to the illumination source and that this is an important distinction.

The examiner further noted that any limitations that have not been previously presented and would require further consideration and/or a new search.
